 What is Policy 986 AED?

Policy set in place among others to build a framework from 2025 onward for any and all cyber criminal and personal cyber attack prevention, authentication saved on paper rather than just digital yet verification is digital and logged Physically with pen and paper to enforce and insure zero digital governance over aspects yet promoting governance between digital and physical assets for security of both ends. Call it a Ionity of sorts being Unity in IO even 1 and 0 other words data on and off.

## Why Policy 986 AED ?

This document and the other such as license usage, licensing, usage, Policy, About and FAQ, all other internal documents form part of whole as concept and execution of. Antwerp Designs does not take responsibility for loss of anykind que to not paying fines and/or legal steps being taking towards unpaid fines and owed amounts. Collections will be enforced on any means.

Antwerp Designs has been target not exposed in this document yet on digital platform and authorities local and internationally to accessive data theft and data manipulation via networks and connections governmental local and other. This document is to ensure that these actions do not take place with any person. Please wistle blowers are welcome.

## Why Antwerp Designs ?

The worst case can only be stated as Personal Isolation Cyber attack where the victim is locked down totally out of all sosial media but meta still had some open links, oppressed in physical enviroment even at local police station and placed in multiple sandboxes digitally limiting your web usage and even screen layering on mobile, on new devices with a preset plan to gather data, manipulate, use ai with wrong intentions to obtain what is owned by another via a full personal cyber attack worse than dDos and including. This can only be described as preset yet automated attack that can trace voice signals via d.2 Disagrams among other wats, keyloggers, cach and Over SSH and any Certificates on networks not disclosed here. I Johan gathered a magnitude of data regarding these actions over a course of 5 months with the first two just being defending what was mine since 2024.11.25 when 5 Banks SMS at the same time and I saw multi-platform movement into even SMS PROMPTS, links.Losing 34kg in 4 months and not stopping fighting back until the end, Sleepless nights and I do not wish this for any person as those who luanchd it against me even was not at their keyboards but automated, learning and exsessive. I got knocked to the dust yet I will not remain in the dust as I even then was compling this document that got wiped over 300 times or edited while I was trying to save. Now its a different outcome.

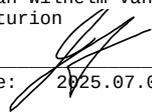

You too can have controll. Cybercrime is real, do not forget every person can be a target if the line crosses the wrong data. My Ai development only opened up This month as any Ai I touched had been or gets inbjected and I coudent even get a word document from it. Now its fair game, The sky is the limit. This document is man-written yet intended for all even I like Ai being into IoT cross system integration as The last project was a Sectional blackbox that protects your system from external tracking even geolocation making use oif geofencing in a data steam aspect. All those documents are history and clients of that time also due to this attack that started yet it ended almost 8 months later 246 days.

Being caught offguard was the shock, changed data dates such as 1972 even on cloud, on a new device while tuanting with voice calls and death policy sales at 4am in the morning all while there are 42 visable IP's on one system while network is unpullgd led to the luanch of Project Alpha Ionity or Alion. There are many ports and ways used we need to aware and awake as there is nothing to fear once that way is cleared. Now fully broken out and protected. Antwerp Designs wants to help others that can or could be in the same attack in days to come. The logs and statements are extensive and not shared here. Ai is not evil the INTENT of the one behind the axe determines the cutting. Watch your INTENT above all.

Identity theft is not an toy. Be aware, be prepared.  
 Our INTENT is to secure and preserve what is true.

Kind Regards,

Johan Wilhelm van Antwerp  
 Centurion
